

OOPs Class-3

Special class

⇒ Lat class of oops
⇒ N Queen → Sudoku
⇒ Plus ⇒

⇒

Runtime polymorphism

/ Dynamic

⇒

⇒

fⁿ Overriding

⇒ Dad

Child

Animals are — n

Animal
Sound
-

Dog
Sound

Dog * dog = new Dog();

⇒ Animal * animal = new Dog();

dog → sound()
cat → sound()
parrot → sound()

animal → sound() →

Problem ??

⇒ Compile Time → Static Binding
Early Binding

Animal
Sound

Dog
Sound

Animal * a =

new Dog();

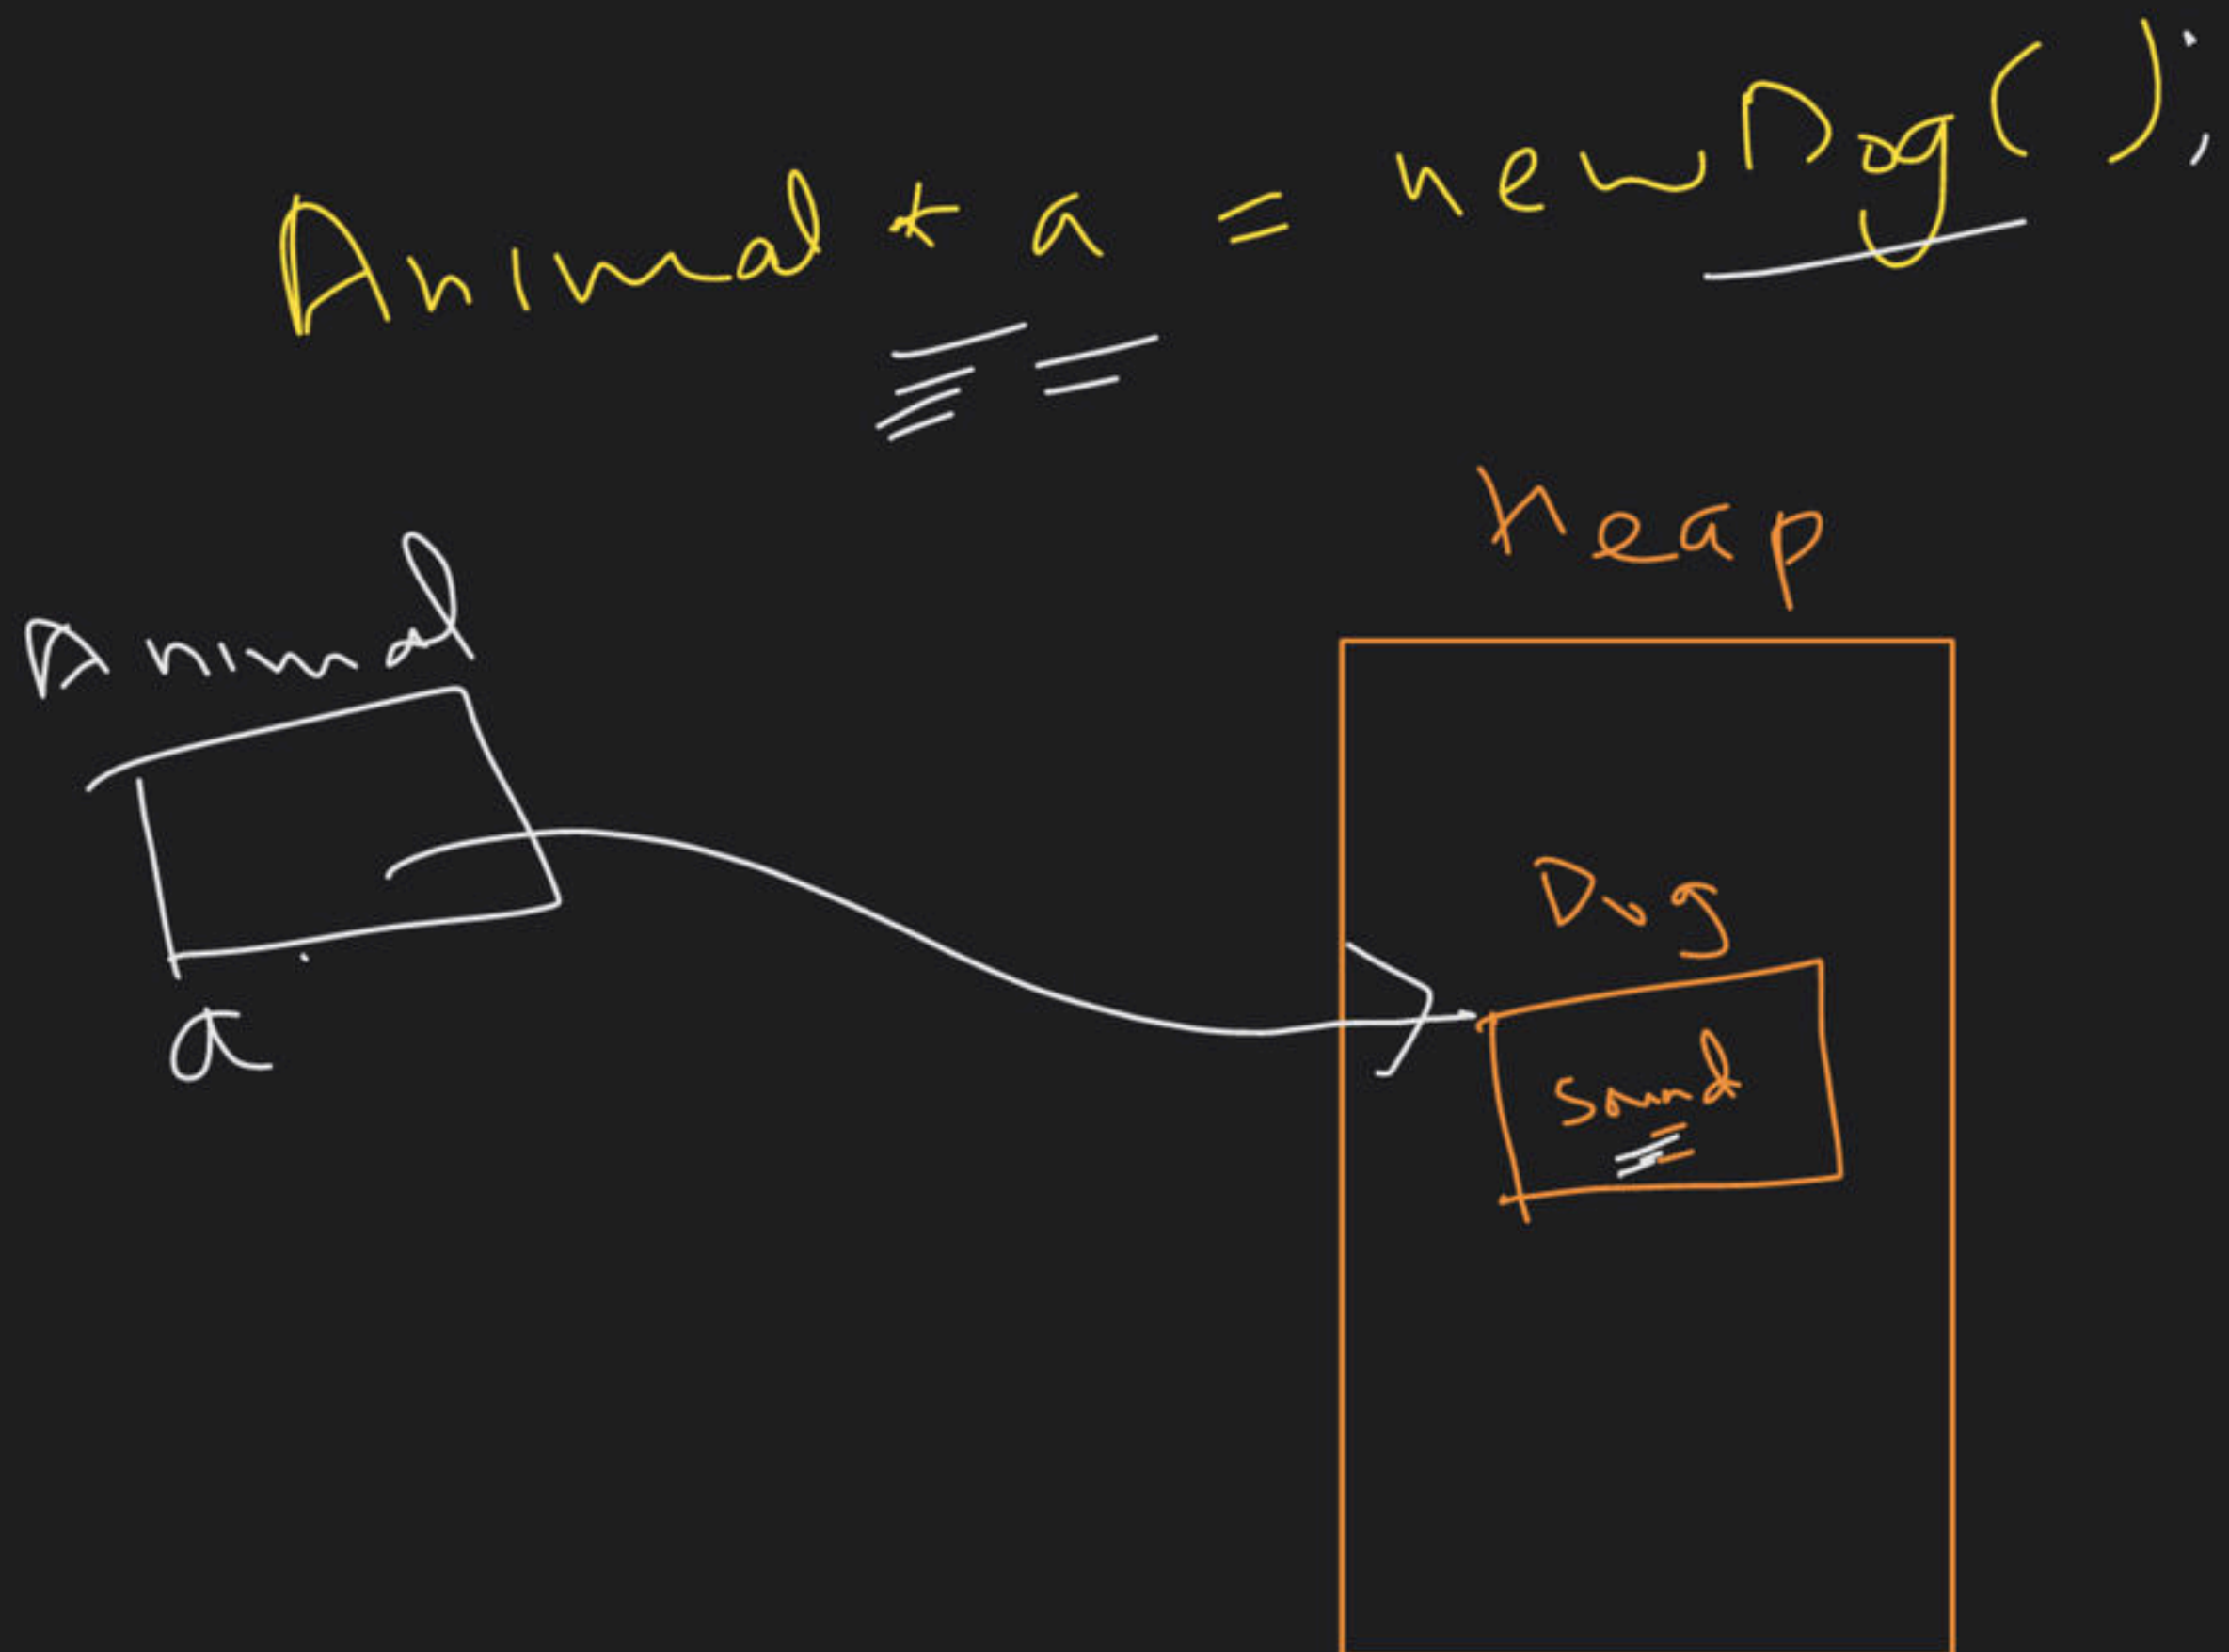

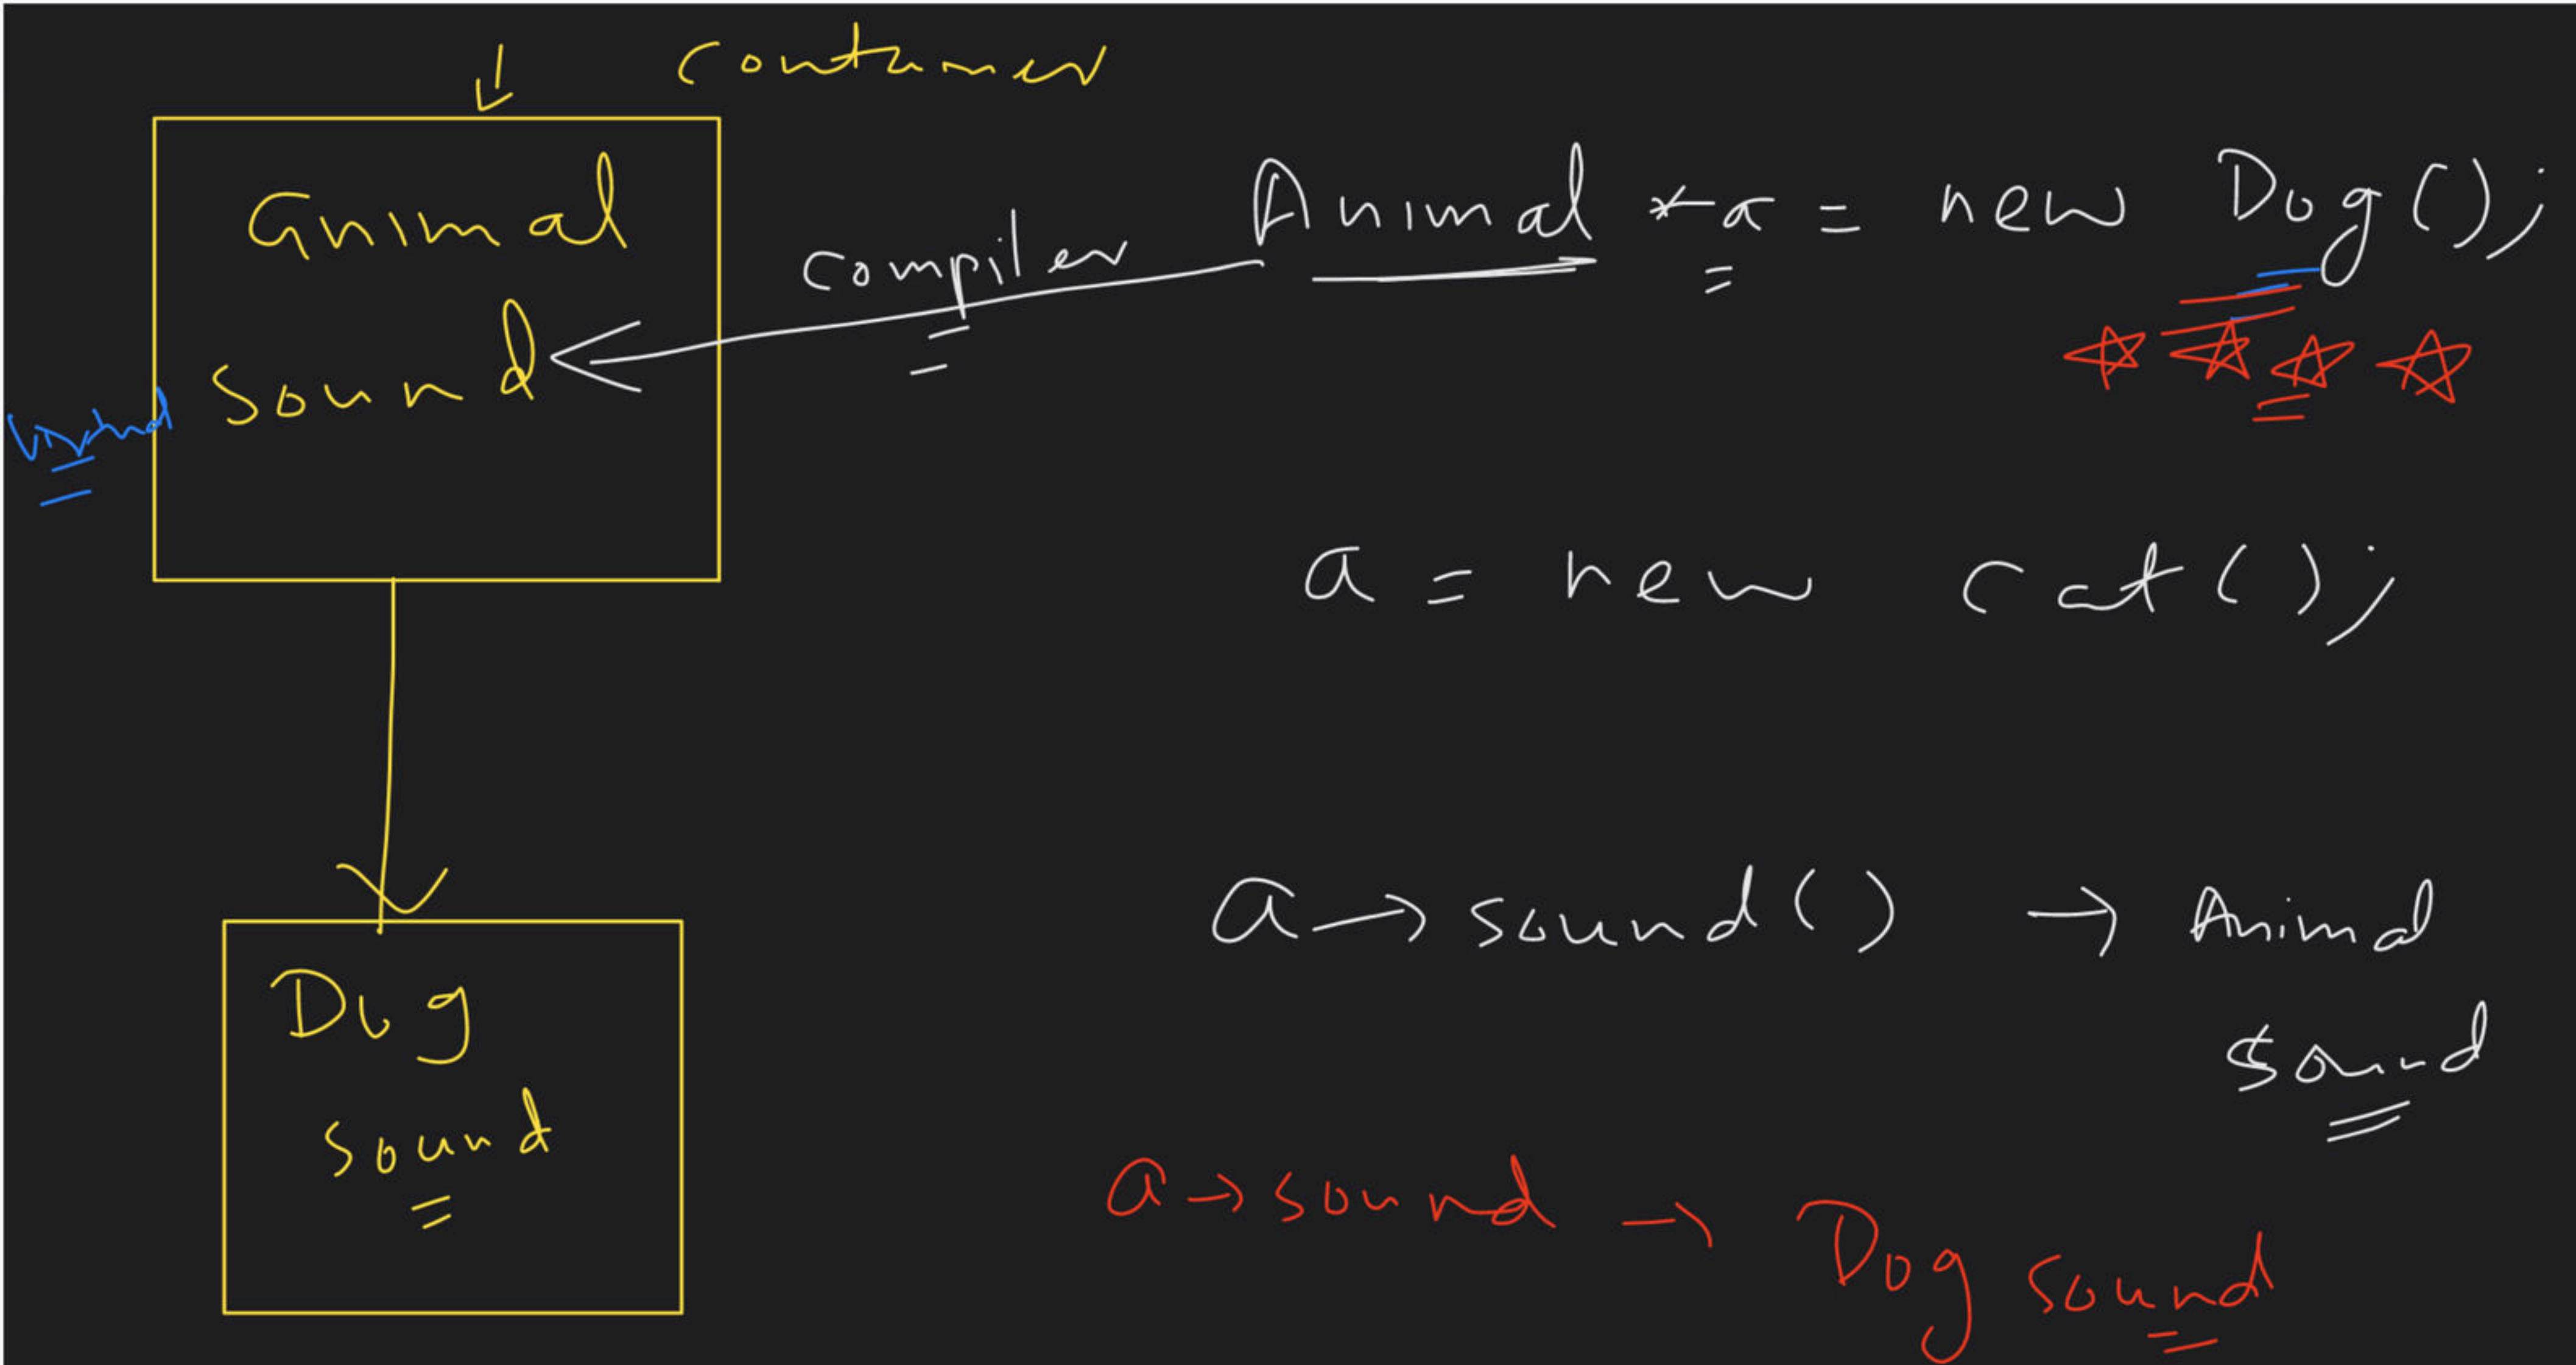

We need a way

Dynamic
Poly.
=

⇒ Virtual → Chizo ko Runtime
par chhodne ka
Decision

w/o virtual
=> Parent * a = new Parent();
 '/' * a = new Child();

Child * a = new Child();

Child * a = new Parent();

=> w/o virtual keyword in
 Parent class

=> Left me jo likha hai
 uske fⁿ call hogi

With virtual \rightarrow Parent ke f^m.

Parent * a = new Parent() \Rightarrow Parent

" " a = " child() \Rightarrow child

child * a = new child() \Rightarrow child

child * a = new Parent() \Rightarrow Parent

①

full implement \rightarrow

1.5 hr

②

No

"

\rightarrow

0 hr

③

partial

"

\rightarrow

1 hr

2 min Break

⇒ String STL

⇒ `<string`

MyString

→ OOPS

→ #include "mystr"

⇒ String → "codehelp"

char* →

MyString.h

include

MyString.cpp

definitions

main.cpp

MyString s;

⇒ MyString →

s.erase

Assignment

push-back

+=

[]

pop-back

append()
